

Marine Dispersants

The Finasol Range

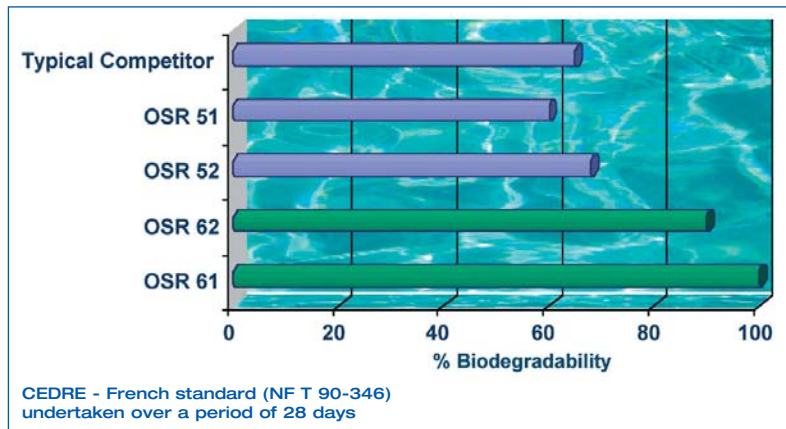

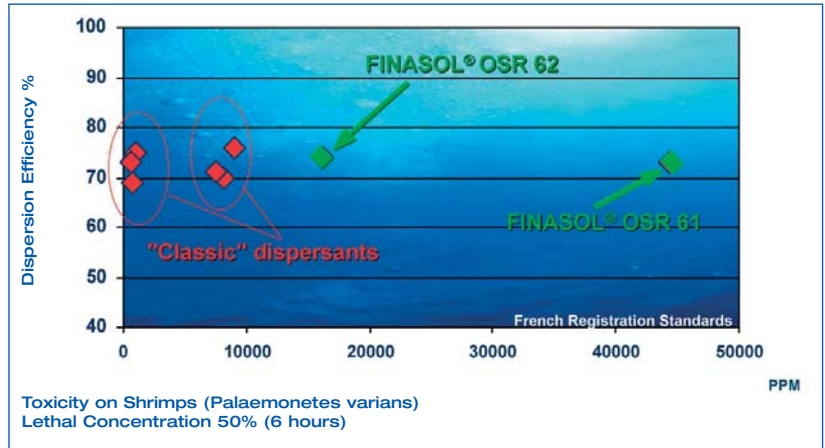

Total Marine Dispersants

Non-toxic & biodegradable pollution control in ports

Total's range of marine dispersants are designed to fight against pollution at sea, and are efficient across a broad range of temperatures, salinity & concentrations. Their role is to divide pollutants into miniscule droplets, increasing the rate of bacterial activity and accelerating natural biodegradation.

Efficient & non-toxic

When pollution occurs, fast and effective clean-up is critical to the well-being of our environment. To guarantee that the act of cleaning up this pollution does not cause further harm, Total has invested in the development of a range of non-toxic marine dispersants capable of excellent dispersion efficiency.

Biodegradable Marine Dispersants

The work of a marine dispersant is not finished when the pollution has been dealt with; a marine dispersant which lingers after the pollutant has been dispersed is a serious environmental risk. Total has therefore developed a range of industry leading biodegradable dispersants which display biodegradability characteristics of up to & including 100%.

Registration

Total's range of marine dispersants are approved for use all over the world. Finasol OSR 52 is unique in being the ONLY product to be registered with The CEDRE* in France, The DEFRA** in The United Kingdom & The EPA*** in The USA.

* CEDRE (France) - Centre de Documentation, de Recherche et d'Expérimentations sur les Pollutions Accidentelles des Eaux

** DEFRA (UK) - Department for Environment Food and Rural Affairs

*** EPA (USA) - Environmental Protection Agency

Packaging

All Finasol products are available for purchase in bulk quantities, 1000 litre containers, 200 litre drums.

51 Esplanade du Général de Gaulle, 92907 Paris La Défense Cedex - France
